On **November 19 - 20**, 2015 the **7<sup>th</sup> workshop „Seabed Acoustics“** will be held in **Rostock-Warnemünde**.

You may still have good memories on the previous workshops. We received much positive feedback and have started already with enthusiasm and new ideas to prepare this year's event.

Main focus are presentations and discussions, which are planned for the first day of the workshop. Development projects, technology reports and user experiences in the field of acoustical seabed investigation will be presented. After the presentations, during the session breaks and at the popular evening event will be sufficient time available for discussions and exchange of experiences. Workshop language is English.

During the second day of the workshop equipment will be shown in operation on a river boat.

Please pre-register by e-mail ([workshop2015@innomar.com](mailto:workshop2015@innomar.com)), phone or fax to receive a detailed workshop programme that will be sent early September.
